Springboard

DESIGN SPECIFICATION

CONTENTS

Springboard is a service that helps immigrant parents navigate an unfamiliar school system by preparing them for conversations with school staff and providing a reference to act on the outcomes of those discussions.

RESEARCH

This design was informed by the conducting the following research activities:

1: Secondary research

2: Expert interviews

3: Artifact inquiries

4: Competitive assessment

5: Surveys

6: Behavioral prototypes

Parental involvement significantly impacts a student's emotional well-being and academic success. Communication with school staff is an important aspect of involvement, but immigrant parents face several communication barriers. Parents and school staff may not share a common language, which makes comprehending communications difficult and hinders the parent's confidence to express themselves. In addition, parents might have availability or resource constraints that aren't relayed to school staff and thus not accommodated for. On top of that, the operational procedures and roles of school staff are not identical across cultures, which may create confusion for the parent when trying to navigate the school system.

Personal engagement with school staff is an important step toward overcoming the challenges of being an immigrant parent. The education of teachers themselves is crucial to good engagement with parents, but teachers often lack such training, especially regarding crossing cultures. However, a general knowledge of a culture is not enough to establish empathy; communication, interaction between individuals, is necessary for understanding and helps eliminate bias. Mutual understanding that leads to logistical efficiency in supporting the student can be achieved by giving parents a place to express their goals, ask questions, and reveal their constraints.

SYSTEM OVERVIEW
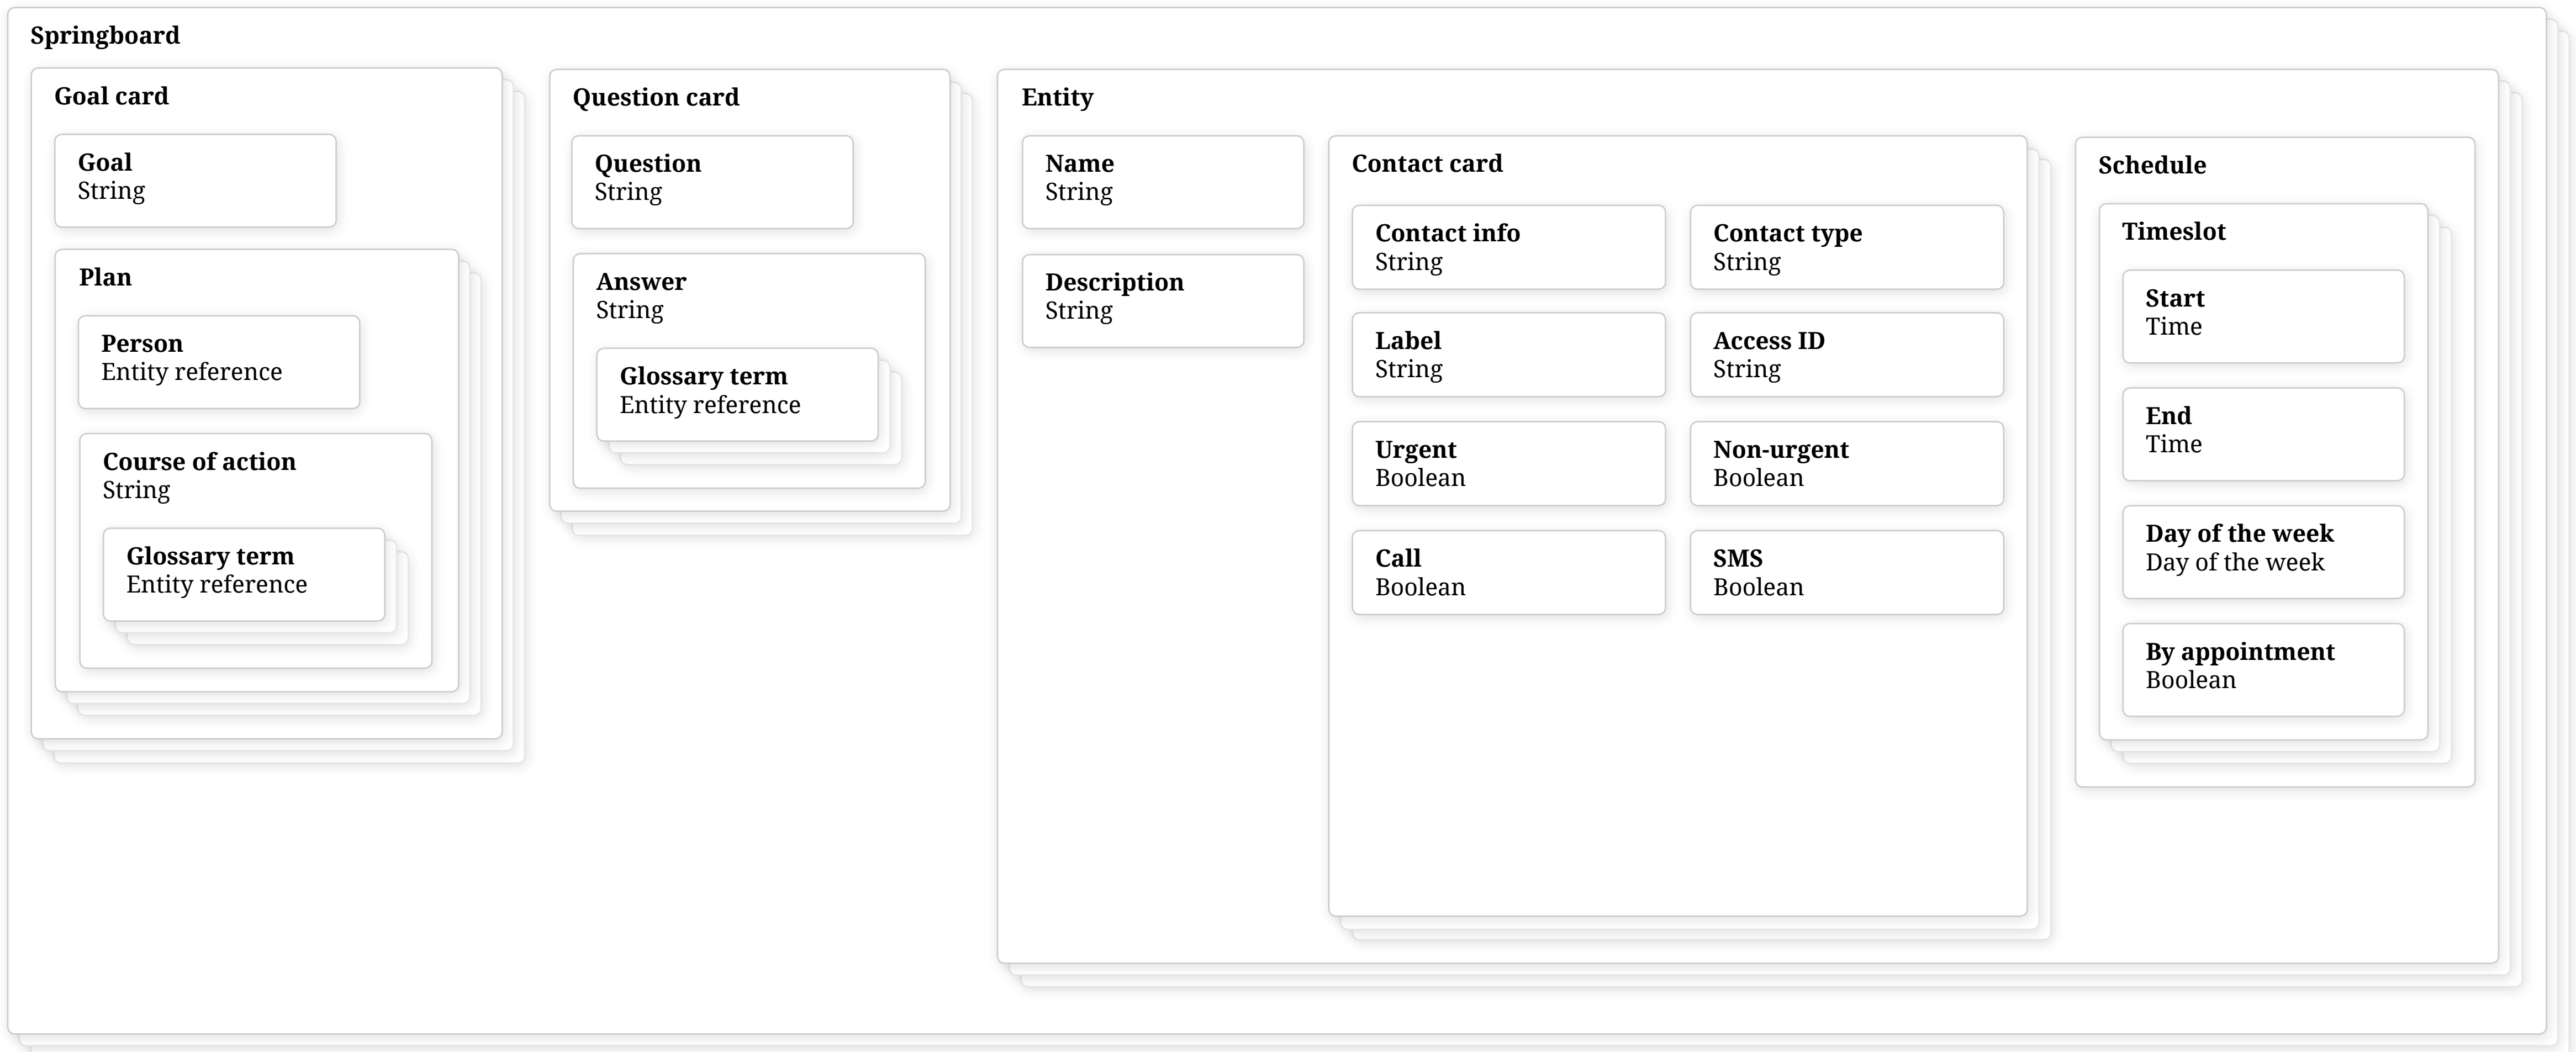

SERVICE BLUEPRINT

Springboard lives in a website, but requires coupling with external systems in order to bring the product to the people, and people to one another. The website must be advertised through channels such as conferences, community centers, blogs, and word-of-mouth. Once a springboard is prepared, the parent and school staff must meet to have a discussion to fill in the rest of the springboard.

	DISCOVERY	ONBOARDING	PREPARATION	DISCUSSION	REFERENCE
Outcome				Mutual understanding	Logistical efficiency
Parent	Discover	Go to site / Understand service / Decide to use service	Invite school staff / Learn to use service / Customize template	Meet / Discuss / Record	Refer to Springboard / Have more questions

Springboard ⊕⌄ ①

What is Springboard?

Springboard is a service that prepares parents for conversations with school staff and provides a reference to act on the outcomes of those discussions.

Why should I use Springboard?

Schools have many resources to help you support your child's education, but unless you let them know about your resources and priorities, they may not understand what the best way to partner with you is.

Sometimes, it's hard to communicate with school staff because of a language or cultural barrier. Springboard helps you connect with school staff despite those barriers.

COLORS

GRAYS   24

HUES   25

GRAYS

Grays are the core color that visually communicates content and interface elements in Springboard.
GRAYS

White #ffffff

Background color of screen. Text color for buttons that aren't gray.

Light gray #e6e6e6

Muted color for shadows, and activated elements such those in buttons groups.

Gray #cccccc

Border color for unimportant interactive elements. Also used for unimportant text.

Dark gray #969696

General color for anything that should have presence but not focus.

Black #444444

Color for most text that is not on a hued background.

HUES

Hues are used to signify characteristics of content or interface elements that are interactive or require special attention.
BLUES

Blues give elements focus and suggest interactivity.

■ **Primary fill #00a6f8**
Background color for interactive elements.

■ **Primary stroke #0098e4**
Text or border color for interactive elements.

■ **Primary shade #007dbd**
Color used for activated interactive elements, such as hovered primary buttons.
TEALS

Teals are used for navigation bar elements.

■ **Brand fill #4fc7e8**
Background color of navbar.

■ **Brand stroke #49b8d7**
Background color of secondary navbar.

■ **Brand shade #3d9cb6**
Border color for activated elements on the secondary navbar.
REDS

Reds warn the user of errors that need to be fixed or denote interactive elements that have consequential actions.

■ **Danger fill #f85d43**
Used sparingly for buttons with very consequential actions.

■ **Danger stroke #eb4b27**
Border color of elements with errors. Text color of error descriptions. Also used for buttons with consequential actions that are hovered.

■ **Danger shade #c03c1e**
Used for hover states of danger elements.
ORANGES

Oranges are used for speech elements.

■ **Accent #f79400**
Used for the background of the text-to-speech button.

■ **Accent Stroke #ed8e00**
Used for active text-to-speech elements.

■ **Accent shade #da8200**
Used for hover states of text-to-speech elements.

COMPONENTS

TERMINOLOGY

ELEMENTS, GROUPING, AND LAYOUT

Component

Building blocks of the interface and content. Examples include buttons, menu items, and paragraphs.

Component group

Groups of components that are highly related. In general, components in the same row are a component group. Labels and their descriptees are also a component group.

Section

Groups of component groups that are related. In general, sections start with a Heading 1 component.

Container

The area in which components are allowed to appear in on the screen.

The container shrinks to the height of the components, and has a maximum width of 960 dp.

The container is centered horizontally relative to the viewport.

The container is has left and right margins of 16 dp for viewports under 800 dp, and left and right margins of 48 dp for viewports 800 dp and wider.

UNITS AND SIZING

dp

Density-independent pixel. In the current state of the W3C specification for web browsers, the unit px is equivalent as long elements are scaled to account for screen DPI.

For more information on screen units, see http://sebastien-gabriel.com/designers-guide-to-dpi/

grow

Also known as sizing to the container.

Increase the length until a size restriction is reached. If there are multiple components along an axis that grow, they should all grow the same absolute amount more than their minimum size.

For example, a container 500 dp wide and two components in the same row that have minimum sizes of 100 dp and 200 dp wide respectively will grow to sizes of 200 dp and 300 dp wide respectively. (This example does not account for the spacing required between the components. See Spacing.)

shrink

Also known as sizing to the content.

Decrease the length until a size restriction is reached.

ICONS

Unicode character codes

We use FontAwesome 4 for our icons. Unicode character codes are listed under the components that use them.

SPACING

1: Components must stay within the container.

2: Non-navigation components should have a starting position at 16 dp below the navbar(s) for viewports under 800 dp wide and at 32 dp below the navbar(s) for viewports over 800 dp wide.

3: Sections have a 48 dp margin between them.

4: Component groups have a 16 dp margin between them.

5: Components inside other components have must have at least 16 dp between their outer edges.

6: Components in the same component group have an 8 dp margin between them.

7: Content (ie. text, icons) within components must have a minimum of 8 dp padding above and below the content. Additionally, they must have a minimum of 16 dp padding on the sides.
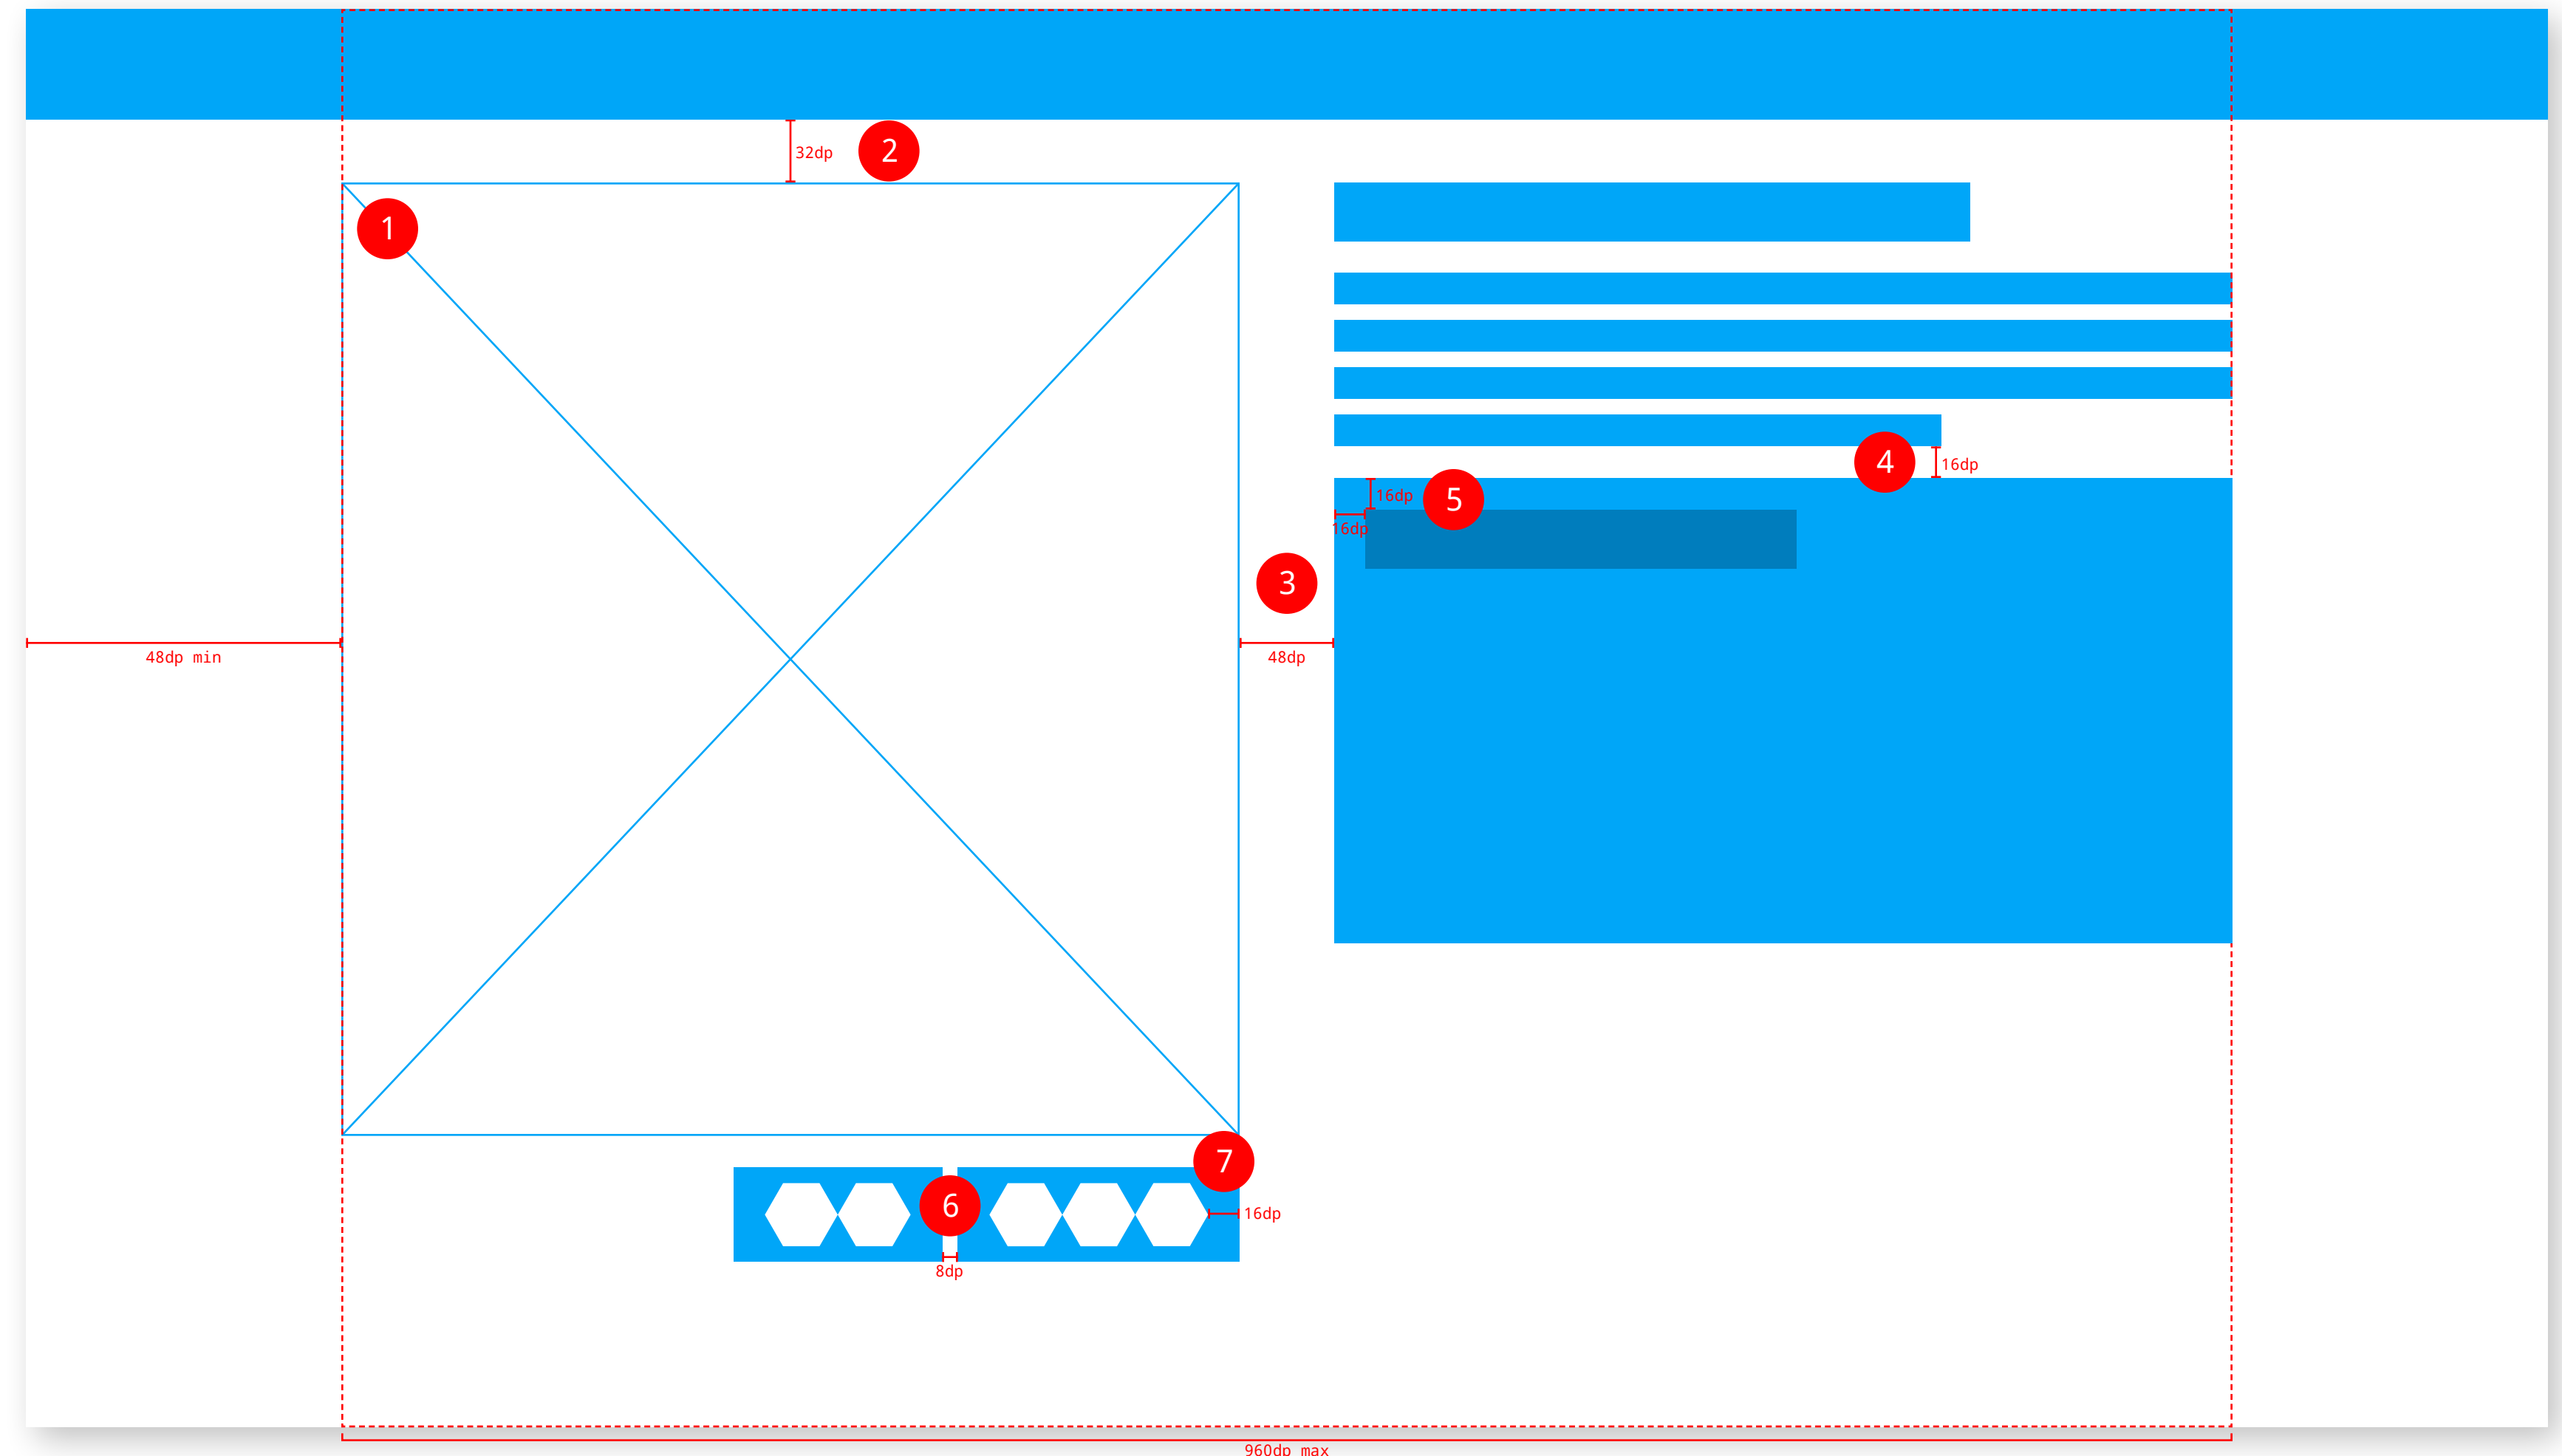

MINIMUM SIZES

All components must meet the following minimum size requirements, based on the affordances of the component.
ABSOLUTE MINIMUM

All components must have a minimum width and height of 16 dp. This ensures that they are visible.
TAPPABLE COMPONENTS

Tappable components must have a minimum width and height of 40 dp. This ensures that those using fingers to select them can comfortably do so.

Examples of tappable components include buttons and inline glossary terms. Inline glossary terms and checkboxes are exempt from the minimum height requirement.
DRAGGABLE COMPONENTS

Draggable components must have a minimum length of 40 dp. The sum of the width and height must be at least 100 dp. This ensures that any visual change in the component while being dragged. can be seen despite a finger partially obstructing it.

Springboard does not currently use draggable components, but should such functionality be required, components should follow this guideline.
SWIPABLE COMPONENTS

Swipable components must have a minimum length of 80 dp. This ensures that fingers approaching the component at an angle can comfortably hit their intended target with room for follow-through.

Examples of swipable components scrollable areas.

GLOBAL STYLES

KEYBOARD FOCUS

When a component has keyboard focus, the component should have the same style as if it were hovered.

TOUCH STATES

For devices using touch rather than a cursor, hover states should be used when an component is touched.

CORNER RADIUS

Components with rounded corners have a corner radius of 4 dp unless otherwise specified.

TRANSITIONS

When components transition between states, they use an easeOutElastic curve. For more information, see https://github.com/danro/jquery-easing/blob/master/jquery.easing.js

TYPOGRAPHY

To ensure that Springboard can be easily distributed and cover most languages, we use Google's Noto fonts for all our typography. This also has the benefit of harmonizing interface elements even when they are in different scripts.

20dp[**Lorem ipsum**]24dp

HEADING 1

Font family: Noto Sans

Font weight: 700

Font size: 20 dp

Font color: primary stroke

Line height: 24 dp

Text align: left

Text case: sentence case

Most sections and pages will start off with a Heading 1. Headings may be longer than one line. There can be more than one Heading 1 in one page.

When using Heading 1s, consider what the navbar title is; there's no need to be redundant in describing the content of the page.

16dp[Lorem ipsum]24dp

BODY

Font family: Noto Sans

Font weight: 400

Font size: 16 dp

Font color: black

Line height: 24 dp

Text align: left

Text case: sentence case

Most content will use Body as its style.

Examples of Body include paragraphs and labels for form fields.

Lorem ipsum

GLOSSARY WORDS

based on body

Font color: primary stroke

Font weight: 700

Text decoration: underlined

Use inline with body text. When glossary terms are selected, a pop-up with a brief definition appears.

12dp[Lorem ipsum

SMALL TEXT

based on body

Font family: Noto Sans

Font size: 12 dp

Font color: dark gray

This should only be used for microcopy that doesn't exceed one line.

Use for descriptive text such as the "last discussed" date at the bottom of springboard cards and form help text.

TYPOGRAPHY

To ensure that Springboard can be easily distributed and cover most languages, we use Google's Noto fonts for all our typography. This also has the benefit of harmonizing interface elements even when they are in different scripts.

Lorem ipsum

SPOKEN

based on the text of the component

Text decoration: underline

Stroke weight: 2 dp

Stroke color: accent stroke

Use for any text that is currently being spoken. When the text is no longer spoken, it immediately loses its style.

Lorem ipsum

HEADING 2

based on body

Font size: 20 dp

Use to separate sections into subsections to add further clarity to the structure of the content.
BUTTONS

Buttons are the primary way that users interact with Springboard. Most actions that do not involve choosing or form input should be handled using buttons. Button text should be succinct.

LANGUAGE

LANGUAGE SUPPORT

Springboard is multilingual and covers all languages its users need. Translation is provided through a combination of the Springboard organization (for interface elements) and crowdsourcing (for content).

For text-to-speech and speech-to-text, Springboard relies on the capabilities of the device of the user to provide such functionality.

EDITORIAL STYLE

Due to the context of some of Springboard's userbase and the need to translate interface elements into multiple languages, Springboard needs to have certain considerations when communicating with words.

BE BRIEF

The more words are on a page, the more there is for us to translate. Being brief also prevents parents from being overwhelmed.

BE INFORMATIVE

Though the column to the left says to be brief, Springboard must also be informative and not take too much for granted when explaining concepts to a user. Try to clarify any potentially vague instructions either by using different vocabulary, sentence structure, or a follow-up sentence.

AVOID IDIOMS

Idioms can be hard to translate from one language into another. However, if the cultures that share a language would find a lack of idioms inappropriate, do not restrict idioms from them in a way that would be culturally insensitive.

USE SIMPLE LANGUAGE

Not only is simple language easier to translate, it is also easier for people with limited language skills to understand.

One exception for simple language is relevant jargon. For instance, may be more clear to use the word 'communications' rather than the list 'notes, messages, emails, news, and/or phone calls'.

TONE OF VOICE

Springboard should always communicate in a way that respects and encourages the parent. Achieving an appropriate tone requires matching the four dimensions below.

FUNNY	SERIOUS	CASUAL	FORMAL	IRREVERENT	RESPECTFUL	ENTHUSIASTIC	MATTER-OF-FACT
Springboard should be mostly serious since many topics of conversation may be serious. However, making stakes sound higher than they are may alienate users.
Just right

"Springboard helps you have a conversation with your child's teacher."

Too funny

"Springboard lets you meet the teacher on a hot date. Without the hot date part."

Too serious

"Springboard prepares you to communicate with your child's teacher in an optimal manner so that your child's future will not be as uncertain."

Springboard should fall midway between formal and casual, leaning toward formal when in doubt.
Just right

"Are you sure you want to remove this card?"

Too casual

"Wanna remove the card?"

Too formal

"Are you completely certain that you would like to proceed to remove the card?"

Springboard should always communicate in a way that respects the repsonsibility of supporting children.

Just right

"The phone number does not seem to be valid. Please check your input."

Too irreverent

"That's not a phone number, doofus!"

Too respectful

"Sir, we believe your input may have a mistake. Would you mind attempting to input your phone number again?"
Springboard should make parents feel hopeful and sometimes even excited about engaging with the school.

Just right

"You're ready to discuss with the teacher!"

Too enthusiastic

"Oh my goodness. Can you believe it? It's almost time to talk with the teacher!"

Too matter-of-fact

"You are prepared to have a discussion with the teacher."

TEXT-TO-SPEECH

All text and icon elements on the screen can be read aloud by Springboard. This includes temporary content such as popovers or user input.

Springboard's text-to-speech button acts as a clutch that prevents all other interaction events (clicking, swiping, etc.) from happening when it is activated. The clutch stays active until the user turns it off by pressing the text-to-speech button again.

When there are abbreviations in the interface, such as 'W' for Wednesday, text-to-speech will read aloud the what the abbreviation stands for rather than the abbreviation itself, unless the abbreviation is better known than what it represents (e.g. 8 PM).

When there are icons in the interface without accompanying words, text-to-speech will describe what the component with the icon does.

MACROCOPY

LANDING PAGE

What is Springboard?

Springboard is a service that prepares parents for conversations with school staff and provides a reference to act on the outcomes of those discussions.

Why should I use Springboard?

Schools have many resources to help you support your child's education, but unless you let them know about your resources and priorities, they may not understand what the best way to partner with you is.

Sometimes, it's hard to communicate with school staff because of a language or cultural barrier. Springboard helps you connect with school staff despite those barriers.

INVITATIONS

EMAIL

Hello!

[Name of parent], a parent of one of your students, has invited you to use Springboard. Springboard is a way to kickstart collaboration with the parent to support their child in a focused way both inside and outside of school. With Springboard, [name of parent] will be able to better express what their needs and wants are so that you can partner with them in the most efficient and effective way possible.

You can access Springboard by clicking the link below and using your email address to confirm your identity:

[access link]

Skeptical? Visit our site at [Springboard landing URL] to hear about how Springboard has helped other parents and school staff better support their children.

TEXT / SOCIAL MEDIA

Hi! [Name of parent] has invited you to a conversation using Springboard. You can go to [access link] to get started, or learn more at [Springboard landing URL].

INSPIRATIONAL PROMPTS

GOALS

Where do you want to see your child in 10 years?

What kind of person do you hope your child grows up to be?

What kind of academic achievements would you like to see your child achieve?

What areas of growing up is your child struggling in?

What is something you hope your child will be able to in the future?

What interests does your child want to pursue more?

Are there any concerns you might have about your child's health?

How would you like your child to relate to other students at school?

Are there any ways you want to be more involved in your child's life or education?

QUESTIONS

What situations are you not sure what to do in?

Are there any words or phrases you don't quite understand?

Is there anything that makes parenting particularly challenging for you?

What from your home culture do you miss the most that you would like to see more often?

Are there any organizations you want to get involved with but don't know where to start?

Is there anything on the school calendar that you want to know more about?

Is there any information you feel like you should know but do not?

What do you hear other parents talking about that you think might be important?

Ask about anything! The worst thing that can happen is that the school will point you to a great resource outside the school.

BACKEND

AUTHENTICATION

Every springboard has a unique IDs for each contact (email, phone, social media account) that is invited to see the springboard.

To access a springboard, you must have the right combination of unique access ID and contact.

When setting up the springboard, access IDs are sent to yourself and anyone else you invite. The access ID is included in the message both as text and as a link that auto-fills the access ID in the login page.

The access ID sent to your email will not match the access ID sent to your phone or another email account, even though they access the same springboard.

Once you have used a compatible unique ID and contact information combination to log in, you can view any springboard that is linked to your contact information that you used to log in.

AUTO-SUGGEST

Each goal/question ever inputted has a score and translations. Goals/questions that fuzzy match (i.e. are similar) are consolidated.

When someone inputs or translates a goal or question, the goal/question is compared to a database of all goals/questions asked before. If a match is found, that goal/question's score is increased.

When the parent types a goal/question, the system finds all relevant goals/questions that have been previously submitted, sorts them by their score, and then returns 4 random goals/questions from the top 20% and 1 random goal/question from the bottom 80%. These are displayed in a random order to the user.

Goals/question scores may be adjusted based on language or area.

INSPIRATIONAL PROMPTS

Springboard provides inspirational prompts to expand parents' ideas of what they can talk about with the teacher.

Springboard aims to not give parents prompts that they have already seen recently to expose the parent to as many topics as possible.. Springboard also acknowledges that its users will likely have communities that share information, so showing the same prompts in the same order is not ideal either.

When the parent signs up for Springboard, all possible prompts are randomly sorted into groups of 3. The groups of 3 are randomly sorted into an order.

When the parent reveals the inspirational prompts, they only see one group of 3 at a time. The next time they reveal inspiration prompts, they will see the next group of 3. When all groups of 3 are exhausted, the prompts are once again shuffled.

Of course, inspirational prompts for goals and inspirational questions for questions are different.

SCHEDULE COMPILATION

When showing the availability of a person, Springboard automatically processes the timeslots in a way that allows people to view availability separated by days in an agenda format, not the combined-day format used in the creation of the schedules.

SPRINGBOARD CARD CONTENT

Springboard's home page has a list of springboards. Below are specifications about how to display information about each one.

If a card has more than one goal or question, be sure to use the plural form (i.e. goals, questions). If a card does not have any goals/questions, don't list them.

For springboards, if a card was discussed within the same day, label it "Last discussed today." Else, label it "Last discussed [date]" (ex: Last discussed Jan 30, 2015) If a springboard hasn't been discussed, label it "Not yet discussed."
